Pearson Engineering is a nationally acclaimed engineering firm with a personal touch, founded in 1986 when Richard Pearson returned to his hometown to offer his brand of problem-solving consulting services. In 2008, the company ownership transferred to Brian Basken and Jeremy Bartell.

With decades of experience in completing ambitious HVAC design and retrofit projects, we make a very clear promise: We’ll apply our unique way of thinking to create cutting-edge, cost-effective solutions for you, and we'll treat your needs as our top priority. We'll look for answers that focus on energy efficiency, save you money and add value to your organization. Together we’ll build a partnership based on trust, service excellence, and proven results. Our track record of engineering innovation and impeccable customer satisfaction speaks for itself.

While our projects are of a grand scale, our company is small by design. Our experienced professionals provide hands-on involvement from initial analysis to follow-up service. At Pearson Engineering, the person you hire is the person who will run your project.
